

LOCUS SONUS DUPLEX PERFORMANCE-thursday August 24th

ROEBLING BRIDGE PERFORMANCE

Live performance simultaneously at Roebling Bridge (DIGIT) at a venue in downtown Manhattan (August 24). We've constructed for this performance 2 IP webcams/parabolic microphones with which we can hunt for sounds in and around the venue streaming them simultaneously to the remote location.

MANHATTAN PUBLIC PERFORMANCE

On the Manhattan side, the performance will take place in the installation space we would also use the wire/stream interface as an instrument to mix and control during the presentation.

In each location laptop performers capture and remix the audio from the mike and video projectors show what the mobile microphones are capturing. Both mixes are played in both locations the musicians responding to their remote counterparts. The Roebling Bridge P.A. will be setup on both sides of the river (the audience will be on the bridge). The idea being that we can use the local distance to reflect the remote distance.
